

# FREE TESTING FOR LEAD IN DRINKING WATER

To Enroll Now, Visit: [leadfree.pa.gov](https://leadfree.pa.gov)

**Program Goal:** To reduce lead exposure in drinking water at childcare facilities and schools by providing FREE training, testing, and expert-assisted action.

**Free Testing & Expert Advice!** Our team will train enrolled personnel at qualifying facilities to test the drinking water in their buildings.

**Where does lead in drinking water come from?** Public water is regulated to be lead-free when it is delivered to you. However, water can absorb lead from solder, fixtures, and pipes found in the plumbing of some buildings or homes.

**Why should you test?** Studies show that no amount of lead exposure is safe for children. Even low levels of lead entering the bloodstream can affect children's health and cause irreversible impacts to the brain.
